Chapter 1

Configuration Files

This document describes the changes that have been made to the configuration files in Sitecore Web Forms for Marketers (WFFM) between the Sitecore WFFM 2.4 and the Sitecore WFFM 9.0 releases.

This document lists the new configuration files that were added as well as the changes that were made to the existing configuration files.

You should use this document as a reference when you use the Express Migration Tool to migrate the Web Forms for Marketers.

When you upgrade an existing solution, you might need to implement the relevant configuration changes manually.

1.1 Server Roles

In Sitecore 9.0, Sitecore has introduced new server role-based rules in the configuration files. Rule-based configuration allows you to set up a server role without manually enabling and disabling individual config files.

All WFFM config files have been updated with the **role:require** attribute.

Configuration File Changes

1.2 Configuration File Changes

1.2.1 Captcha.config

Removed

- In the <preprocessRequest> pipeline, the following processor was removed:

```
<processor x:before="*[1]"  
type="Sitecore.Form.Core.Pipeline.RequestProcessor.CaptchaResolver,  
Sitecore.Forms.Core"/>
```

1.2.2 Sitecore.Forms.Mvc.config

The implementation of MVC support has been changed.

- The Sitecore.Forms.Mvc.config configuration file was removed.
- The new Sitecore.MvcForms.config configuration file was added.

1.2.3 Sitecore.MvcForms.config

Changed

- In the <initialize> pipeline section, the following node:
