# Chapter 1 Media Usage

Sitecore Media Framework allows content authors to insert media into their pages in a variety of ways. This chapter covers the options that are available.

# 1.1 Rich Text Editor

Rich text fields allows content authors to insert formatted content into their pages. Content authors use the rich text editor to create and edit this formatted content. This section covers the features that Sitecore Media Framework adds to the rich text editor.

### 1.1.1 Embed Media

Media can be embedded directly in a rich text field.

1. In the rich text editor, click the Embed Media button.

2. Use the search screen to find the media you want to insert. Click the row that represents the media you want to insert. Click the Next > button.

	ect Media t the specific	a Item Media Item. Click Next to set media properties.

3. Depending on the type of media you select, you will see additional options. For example, if you select a video, you must specify the player that should be used to display the video, along with the dimensions for the player. Click Finish.

Properties Set Width and Height of t	he Media Element.	
Width:	400	
Height:	300	]
Player:	Single Video Player	
		Close

4. The media is embedded in the rich text field.

#### 1.1.2 Embed Media Link

A link to media can be inserted in a rich text field. When the link is clicked,

1. In the rich text editor, click the Embed Media Link button.

# 1.2 Rendering

Renderings allow content to be positioned at a specific location on a page. Sitecore Media Framework includes a rendering that allows content authors to insert media in pages.

#### **1.2.1 Embed Media Rendering**

- 1. Use Page Editor to add a rendering to a placeholder.
- 2. Select the Embed Media rendering.

elect a Rendering elect the rendering that you v	rant to use. Click Select to continue.		
Sample Rendering	Embed Media		
Open the Properties dialog	box immediately.	Select	Cancel

3. The rendering has been added to the placeholder. Now click the Embed Media Element button.

# Chapter 2 Media Management

Sitecore Media Framework allows content authors to manage media using the Sitecore Media Library. This chapter covers the options that are available.

# 2.1 Read-only Mode

If Sitecore Media Framework is configured to be read-only, then the Brightcove media cannot be managed in Sitecore. This means that:

- Changes made in Sitecore will not be recognized by Brightcove.
- The next time Sitecore is synchronized with Brightcove, any changes made within Sitecore may be lost.

# 2.2 Playlists

A playlist is a collection of videos in a single player. Sitecore Media Framework allows content authors to add new playlists, edit existing playlists and delete existing playlists.

### 2.2.1 Add Playlist

Sitecore Media Framework allows content authors to add new playlists.

- 1. Open the Sitecore Media Library.
- 2. Navigate to the account with the videos you want to create a playlists for.
- 3. Navigate to the Media Content item.

Media Framework
<ul> <li>Accounts</li> </ul>
🔺 🍬 My Brightcove Account
🕨 🤔 Media Content
Players
🕨 🚖 Tags
🎲 Settings

4. Add a new Brightcove Playlist item.

- 5. For the Name field, enter a descriptive name for the video.
- 6. For the Video Ids field, select the videos you want to include in the playlist.

#### 2.2.2 Edit Playlist

Playlist items are edited just like any other Sitecore items.

#### 2.2.3 Delete Playlist

Playlist items are deleted just like any other Sitecore items.

### 2.3 Videos

Sitecore Media Framework allows a content author to upload videos from his local machine, as well as to edit and delete existing videos.

#### 2.3.1 Add Video

Sitecore Media Framework allows content authors to add new videos.

- 1. Open the Sitecore Media Library.
- 2. Navigate to the account with the videos you want to create a playlist for.
- 3. Navigate to the Media Content item.

🔺 🎑 Media Framework
<ul> <li>Accounts</li> </ul>

🕨 🚖 Tags
Settings

4. Click Brightcove Video.

5. Click Add files.

Uploader		
Accounts	Add files Start All	- 1
My Brightcove Account		- 1

6. Select the file you want to upload from your local machine.

7. Click Start.

Accounts	Add files Star	t All			
My Brightcove Account	Sandals Caribbean.mp4	Size : Buffering :	26.07 MB	Start Cancel buttering	

8. After the video is uploaded, close the uploader window.

Accounts	Add files Star	t All			
My Brightcove Account	Sandals Caribbean.mp4	Size : My Brightcove Account	26.07 MB	Start GO TO ITEM	

### 2.3.2 Edit Video

Video items are edited just like any other Sitecore items.

#### 2.3.3 Delete Video

Video items are deleted just like any other Sitecore items.

# 2.4 Players

A player is needed in order to display a video or a playlist. A player defines what kind of capabilities are available to the visitor who wants to watch a video. Sitecore Media Framework allows content authors to add new players, edit existing players and delete existing players.

## 2.4.1 Add Player

In order to add a new player you must contact your Sitecore administrator.

# 2.4.2 Edit Player

Player items are edited just like any other Sitecore items.

## 2.4.3 Delete Player

Player items are deleted just like any other Sitecore items.

NOTE: Deleting a player from Sitecore will not result in the player being deleted from Brightcove Video Cloud.

# 2.5 Tags

Tags are used to describe videos and playlists. Sitecore Media Framework allows content authors to add new tags, edit existing tags and delete existing tags.

### 2.5.1 Add Tag

Sitecore Media Framework allows content authors to add new players.

- 1. Open the Sitecore Media Library
- 2. Navigate to the account with the videos you want to create a tag for
- 3. Navigate to the Tags item

<ul> <li>Media Framework</li> </ul>
<ul> <li>Accounts</li> </ul>
🔺 🍬 My Brightcove Account
🕨 🤔 Media Content
Players
🕨 🚖 Tags
Settings

4. Click Brightcove Tag

5. Enter an item name. This will become the tag.

# 2.5.2 Edit Tag

Tag items are edited just like any other Sitecore items.

# 2.5.3 Delete Tag

Tag items are deleted just like any other Sitecore items.

NOTE: Deleting a tag from Sitecore will not result in the tag being deleted from Brightcove Video Cloud.

# Chapter 3 Analytics

Sitecore Media Framework allows video playback events to be recorded in DMS. This chapter covers the options that are available.

# 3.1 Playback Events

Playback events are used to record DMS page events as the result of video player actions. For example, when video playback starts, a DMS page event can be written.

#### 3.1.1 Default Playback Events

Sitecore Media Framework comes with the following playback events:

- Playback Started
- Playback Completed
- Playback Error

#### 3.1.2 Configure Playback Events for Account

By default, the playback started and playback completed events are recorded. This is enabled on the Settings item under the Brightcove Account item.

The Settings item has a field named Playback Events Rules. A rule is defined that tells the Media Framework to record the events that are specified under videos and playlists.

# 3.1.3 Disable Playback Events for Account

All playback events can be disabled for a specific account.

- In Content Editor navigate to the account under Media Library > Media Framework > Accounts
- 2. Select the Settings item

3. The Playback Events Rules field describes the conditions that must be met in order for playback events to be registered. By default, the condition is "where true", meaning "always". Click the Edit Rule button to change the condition, or to remove the existing rule.

nalytics	^
layback Events Rules [shared, original value]:	
dit rule	
Rule 1 where true (actions always execute) add media item events	

#### 3.1.4 Specify Playback Events for Media

Each playlist and video item has a field named Events. This field determines which playback events will be handled for the specified item.

The following screenshot indicates that playback events have been specified for the video:

	^
Selected	
<ul> <li>Playback Started</li> <li>Playback Completed</li> </ul>	* <b>*</b>
*	
	<ul> <li>Playback Started</li> <li>Playback Completed</li> </ul>

NOTE: Standard Values can be used to ensure certain events are recorded for all playlists and videos, but the field also allows individual playlists and videos to have their own events selected.

NOTE: These events will only be recorded if the Settings item under the Brightcove account item has its Playback Events Rules field configured to with the "add media item events" action. See section 3.1.2.

#### 3.1.5 Create New Playback Events

You can add new playback events in order to capture more detailed information about video playback.

- 1. In Content Editor navigate to System > Modules > Media Framework > Playback Events
- 2. Add a new item using the template Playback Event
- 3. For the Page Event field select Playback Changed
- 4. For the Parameter field you can enter a value in one of the following formats:
  - a. Number after the video is played this number of seconds, the page event is recorded. An example of a valid value is 15

- b. Percent after the video is played this amount, the page event is recorded. An example of a valid value is 50%
- 5. Save the item
- 6. Publish the item
- 7. Now you can add the new page event to your playlist and videos

NOTE: Remember to assign the new playback event to your playlist and videos. Otherwise the event will not get recorded.

# 3.2 Reports

Sitecore Media Framework includes a number of reports that pertain to video playback.

#### 3.2.1 Started Playback

This report shows a list of the videos that have triggered the video started event.
